

Ganesh Thangappa

Service Manager

Plano, TX • ganesh_t18@yahoo.co.in • + 1 (430) 666-5925

Education

Title of the Degree with Branch	College/University	Year of Passing
B. TECH (Information Technology)	Jeppiaar Engineering College, Chennai	2011
XII	Sri Seshadri Matriculation Higher Secondary School, Chennai	2007
X	Sri Seshadri Matriculation Higher Secondary School, Chennai	2005

Core Competencies

Architecture & Design	Application Modernization , REST APIs ,Event-Driven Architecture, Serverless, Azure DevOps
Cloud Platform	Azure (VMs, Application Gateways, BLOB, Azure Functions, Azure DevOps), AWS (EC2, S3, VPC, IAM), GCP
Programming Languages	.NET Framework & Core, C#.NET
Databases	SQL Server, Oracle, Stored Procedures, Triggers, Query Optimization, Database Migrations
Domain	Consumer Goods, Retail

Professional Summary

Seasoned IT professional with 14 years of experience in enterprise application design, application modernization, and cloud solutions delivery with 4+ years of expertise in delivery manager. Demonstrated ability to design scalable cloud architectures, lead end-to-end cloud transformation projects by defining cloud migration roadmaps, designing cloud-based architectures , optimize application performance and cloud migration strategies that drive business value.

Extensive background in Retail domain projects, with proven success in procure to pay (P2P) and order to cash (O2C) activities, automation of invoice digitization and approval workflows, integration with enterprise resource planning systems for bookkeeping and payment processing to provide an end-to-end view of the supply chain by integrating revenue and expense operations. Expertise in delivering automation and web applications using Azure, .NET, and Oracle/SQL Server.

Designated in multiple roles such as **Project Manager, and Technical Lead** across development and support engagements. Excellent communicator with experience in **client-facing roles** and collaborator with **5+ years of onsite experience** in USA. Rich experience in client management, stakeholder communication, and global team leadership for large-scale clients like PepsiCo Inc. in the Consumer Goods and Retail domain — consistently achieving on-time delivery, quality excellence, and customer satisfaction.

Employment History

Name of the Company	Designation	Address of the employer	From	To	Duration (Years)
Cognizant Technology Solutions US Corp	Service Manager - Projects	Cognizant Technology Solutions US Corp, 8383 Dominion Parkway, Plano, TX - 75024	07/25/2022	Till date	3.0
Cognizant Technology Solutions	Service Manager – Projects	Cognizant Technology Solutions, Mepz, Madras Export Processing Zone, Tambaram, Chennai-600047	09/01/2021	07/20/2022	0.9

Client: PepsiCo

Project Title	NextGen Digital Imaging
----------------------	--------------------------------

Role	Service Manager - Onshore , Plano, TX, USA July 2022 to Present Dec 2018 to Sept 2021 Service Manager - Offshore ,Chennai, TN, IND Sept 2021 to July 2022 Associate , Plano, TX, USA Oct 2017 to June 2018
Team Size	14
Environment	Languages: Azure, AWS, C#.Net, ASP.Net, RESTful Web API, AngularJS, jQuery, CMIS C#.NET, Azure Blobs, Azure IIS, Azure DevOps, Azure Functions, Azure Storage, SQL, Oracle Database: Oracle 19c

Project Description:

NextGen Digital Imaging project aims to migrate the Image Vision application to an Integrated Next Gen website that involves rewriting the Image Vision application UI in HTML 5 based web application and re-write the gateways into RESTful APIs and onboarding it to Cloud infrastructure. Next Gen Image Vision Website with application modules of API, Cache are hosted on Azure.

The Web User Interface comprises of HTML 5 components and other latest lightweight UI frameworks. The API follows RESTful architecture of web services. The integration components will be designed with a 'Build Once' roll out multiple times mind set within PI landscape, with the initial build allowing for 'configuration 'only or minor design additions to be made for future implementations.

The main objectives for the project are:

1. Provide an integrated UI that combines all existing user interfaces – Retrieval, Workflow, Web upload and Reporting.
2. Implement an overall load-balanced/scalable/fault-tolerant solution through Cloud native services.
3. Migration of Content Repository from S3 to Azure BLOB.

Roles and Responsibilities:

Onshore Service Manager:

- **Architected a cloud-native Accounts Payable(P2P) and Accounts Receivable(OTC) storage system** leveraging **Azure Blob Storage and Azure IIS**, ensuring secure and scalable storage for critical business documents and for fast and secure document retrieval
- **Deployed and configured Windows Server environments within Azure** for backend hosting, ensuring high availability and security compliance
- Implemented **C#.NET APIs** for metadata extraction, storage, and analytics integration, improving processing efficiency to manage **invoices, archival, indexing, and SAP payment posting** across multiple regions
- Managed **end-to-end project delivery** by defining project timelines, coordinating cross-functional teams, and mitigating risks to ensure on-time delivery of **6 cloud transformation applications**

- Managed project timelines using **Agile and Waterfall methodologies**, conducting daily stand-ups and sprint planning to ensure seamless delivery
- Activities include the **elicitation of business procedures**, estimation and rightsizing of the invoice processing modules
- **Provide thought leadership and deliver business insights** to identify and resolve complex issues critical to their success
- **Manage cross-functional team members and subject matter experts, including definition of objectives**, oversight of execution and evaluation of performance. Interact regularly with senior leaders and internal stakeholders to ensure the project is meeting its objectives and solicit feedback on project deliverables
- Communicate effectively with technical personnel as well as management/executives including verbal, formal presentation and written communications
- Developing enhanced management tools that include a platform solution to enable managers to seamlessly manage Bots/Process, including monitoring their daily activities, improving sustain team handling of failures and developing new Change Requests (CRs) to enhance the performance of business process
- Acted as liaison between Client and Offshore team for Issue analysis and status updates
- Define Business Process, Identify the risk and provide baseline acceptance criteria and deliverables
- Collaborated with Enterprise Architecture teams to ensure alignment with cloud governance and security best practices
- Conducted PoCs to evaluate new tools for observability, security, and performance tuning

Offshore Service Manager :

- Implemented API integrations with **third-party services**, enhancing customer experience and reducing transaction errors
- Owned responsibility for **analysis and estimation of the requirements, managing the overall scope of the project, cost and execution** of the Project
- **Lead project tasks** including project planning, financial management, client interaction, staffing and communication
- In addition, perform **review on architecture and design, Implementation and rollout** of the project/new version upgrades along with User Acceptance testing coordination
- **Replatformed Legacy application with Rest API services** that are consumed across multiple interfaces
- **Establish and evolve formal SDLC processes** by developing new functionalities and bug fixes
- Ensure team is using industry best practices and oversee all aspects of **Agile** and Quality assurance
- Managed customer escalations, questions, concerns, meeting client expectations by ensuring the delivery is of the highest quality and **drove incident reduction, faster time to release and CSAT improvement**.

Senior Associate :

- Setting up **proactive alerting mechanisms** for application performance and security threats
- Identifying potential risks in cloud implementations and developing mitigation strategies.
- Conducting technical POCs to evaluate emerging cloud technologies

- Acted as the **technical project lead** for SAP payment posting integration, collaborating with stakeholders and external vendors to ensure seamless data exchange
- Created **roadmaps, timelines, and risk mitigation plans** to deliver projects within tight deadlines
- Conducted **project risk analysis** and mitigation planning to minimize downtime during cloud transitions
- Created project roadmaps and status reports for business stakeholders to provide project updates and identify risks
- Mentored junior developers on **cloud best practices, security configurations, and containerization technologies**.
- **Engage in support and development** of Quarterly releases, performance improvement as Senior Developer

2)

Client: PepsiCo

Project Title	Data Management Organization
Role	Senior Associate , Plano, TX, USA Jun 2018 to Dec 2018
Team Size	5
Environment	Database: Teradata

Project Description:

Data Management Organization (DMO) solution is an end-to-end software platform that involves creating Score Cards for Data Quality Purposes. Scorecards compare data across different data sources by various parameters based on the rules and report discrepancies via email through DMO application. SQL Jobs are scheduled to refresh the reports on a necessary basis. Reported data discrepancies are resolved by fixing the data sources thereby maintaining the quality of the data.

Roles and Responsibilities:

- Worked on multiple data sources like SQL Server, SAP, Teradata and Informatica to bring in data. Various ETL Tools like SSIS and DIH have been used to pull data into Data Quality Environments
- Created Verification, Conversion and Audit Sync Reports using SQL queries to support Scorecards
- Created new queries to support data quality activities across multiple platforms and providing required analytical support across multiple downstream teams
- Identify the risk and provide baseline acceptance criteria and deliverables

3)

Client: PepsiCo

Project Title	Computer Application and System consulting (CAS)
Role	Associate , Monterrey, N.L, Mexico/

	Chennai, TN, IND Apr 2017 to Oct 2017
Team Size	11
Environment	Languages: C#.Net , SQL Tools: CAS

Project Description:

Computer Application and System consulting (CAS) solution is an end-to-end software platform that supports all routes to market, all sales and delivery models, in all geographies, and on all mobile platforms. Built to offer exceptional flexibility and usability, it can be configured to dovetail with most legacy and back-office systems. It helps to manage all sales processes on a single global sales platform from trade promotion management to retail execution, from direct store delivery to customer service, and from lean apps to integrated multi-channel solutions. One can gain the benefits of an integrated sales platform, including mobility and distributor management, on a cost-efficient, flexible basis through this. It also offers a range of pricing options, helping you to achieve high performance in developing markets.

Roles and Responsibilities:

- Involved in developing the solution for the real time issues in project and acting as team member to provide maintenance and support based on priority of various tickets created by end users
- Preparation of Functional Specification document (FSD) and Technical Specification document (TSD) based on the Change Requests from business and onshore lead
- Coordinating within the team for proper defect closure and updating the correct information while raising a new defect in Quality Center are also part of the assignments
- Other tasks include Providing Weekly Status Reports (WSRs), Monthly Status Reports (MSRs) for calculating productivity metrics and performing daily check on systems to ensure its proper functioning
- Collaborate with the other teams to ensure that the data flow of the application is not affected and is stable

4)

Client: PepsiCo

Project Title	Image Vision
Role	Associate , Chennai, TN, IND Apr 2015 to Apr 2017

Team Size	5
Environment	Languages: C#.Net, ASP.Net, RESTful Web API, AngularJS, jQuery, CMIS. Content Repository: IBM FileNet, EMC Centera Database: Oracle 12c, SQL Server 2014 Tools: MS Visual Studio 2008/2010/2012/2015, Visio 2016, TOAD, Enterprise Library 6.0, TFS, GitHub, Team City

Project Description:

"Image Vision" is an advanced File storage system which in general used for document storage, processing and retrieval. It mainly comprises of two services, namely Document Storage Services and Workflow Services. As documents are created, they may go into workflow depending on the system involved. After they arrive in retrieval, they are moved to Centera archival storage for business-prescribed retention period for the document type involved. For users in need of workflow processing, there is an Image Vision Client and similarly for users in need of archive Document retrieval, there is an Image Vision Website.

Roles and Responsibilities:

- Development of application through proper analysis, design, implementation, testing and integration of systems
- Implementing error free modules based on the functional requirements of the client.
- Review artifacts to make it ready for validation and delivery
- Collaborate with other programmers to design and implement features. Ensure that code meets the business requirements and design considerations
- Follow project processes laid down for Coding, testing and Configuration Management. Knowledge Transfer to the resources across teams about the applications
- Developed various tools to automate Space Notification, Deployment across environment. Performing Daily check on systems to ensure its proper functioning

5)

Project Title	BizP Brand Edge - Digital Marketing Platform
Role	Senior Systems Engineer , Chennai, TN, IND Oct 2013 to Dec 2014 Systems Engineer , Chennai, TN, IND Apr 2012 to Oct 2013

Team Size	21
Environment	Languages: C#.Net. , WCF Services Tools: MS Visual Studio 2010

Project Description:

Infosys Brand Edge is a platform that simplifies Digital Marketing. This platform helps marketers listen and understand their consumers and engage with them across a wide array of digital channels. With the digital marketing ecosystem becoming complex and fragmented given the nature of campaigns that are executed today, Brand Edge attempts to provide a single, flexible solution for large-scale organizations to simplify this complexity across multiple geographies and languages, working with multiple agencies and targeting consumers across channels. Powered by an underlying Blue framework, the platform comprises four modules that enable marketers to efficiently build digital assets, effectively listen to and understand target segments and easily engage consumers across a wide array of digital channels.

Roles and Responsibilities:

- Engage in design and development of core modules by .NET WCF technology, Improve application performance, Leverage out-of-box web features, Enhance functionality with custom user controls, event handler using SharePoint and streamline website design
- Develop and maintain the necessary backend queries for web applications, Indulge in SDLC phases of Analysis, Design, Coding, and Testing, Provide technical documentation with functional, flow and class diagram
- Collaborate with other programmers to design and implement features and ensure that code meets the business requirements and design considerations by following the project processes laid down for Coding, testing and Configuration Management
- Bug fixing for production applications via remedy tickets logged for SharePoint customized features, web parts, workflow designs and Production support, Troubleshoot/Debug custom code issues on client-side API in C#
- Responsible for developing migration solution design for designated sites to redevelop customizations using Client-Side object model along with risk Identification and risk management of various implementations
- Developed services (WCF) independently for different modules, conducted reviews of self and peers and performed unit tests
- Fixed issues raised by Quality Assurance team in time

Systems Engineer Trainee , Mysore, KA, IND | Aug 2011 to Apr 2012 :

- Trained in world class training Centre at Infosys Limited, Mysore and had hands on experience in C, JAVA, and RDBMS & UNIX
- Undergone training in .NET Framework 3.5 and SQL Server.
- Trained at Infosys Leadership Institute on Personality development and Business etiquettes
